

INTRODUCTION

The Gill Multi-Plate Radiation Shield protects temperature and relative humidity sensors from error-producing solar radiation and precipitation. This shield relies on a combination of plate geometry, material and natural ventilation to provide effective shielding.

INSTALLATION

The Gill Multi-Plate Radiation Shield is designed to be mounted on a flat surface. For best performance, the shield should be placed in a location with the following characteristics:

- Good air circulation around shield.
- Away from large masses (buildings, masts, solar panels) especially metal items.
- Away from exhaust vents, electrical machinery and motors.
- Away from water fountains and sprinklers.

MAINTENANCE

The Multi-Plate Radiation Shield requires no regular maintenance in normal use. Dirt or dust accumulation on the plates and bracket can be cleaned with soap and water. Do not use solvents.

SPECIFICATIONS

Sensor Mounting:

Model 41002 includes universal adapter for sensors to 10mm diameter.
Model 41002P includes custom sensor adapter that can be machined for sensors to 26mm diameter.

Radiation Error: 1080 W/m² intensity

0.4°C (0.7°F) RMS @ 3 m/s (6.7 mph)
0.7°C (1.3°F) RMS @ 2 m/s (4.5 mph)
1.5°C (2.7°F) RMS @ 1 m/s (2.2 mph)

Construction:

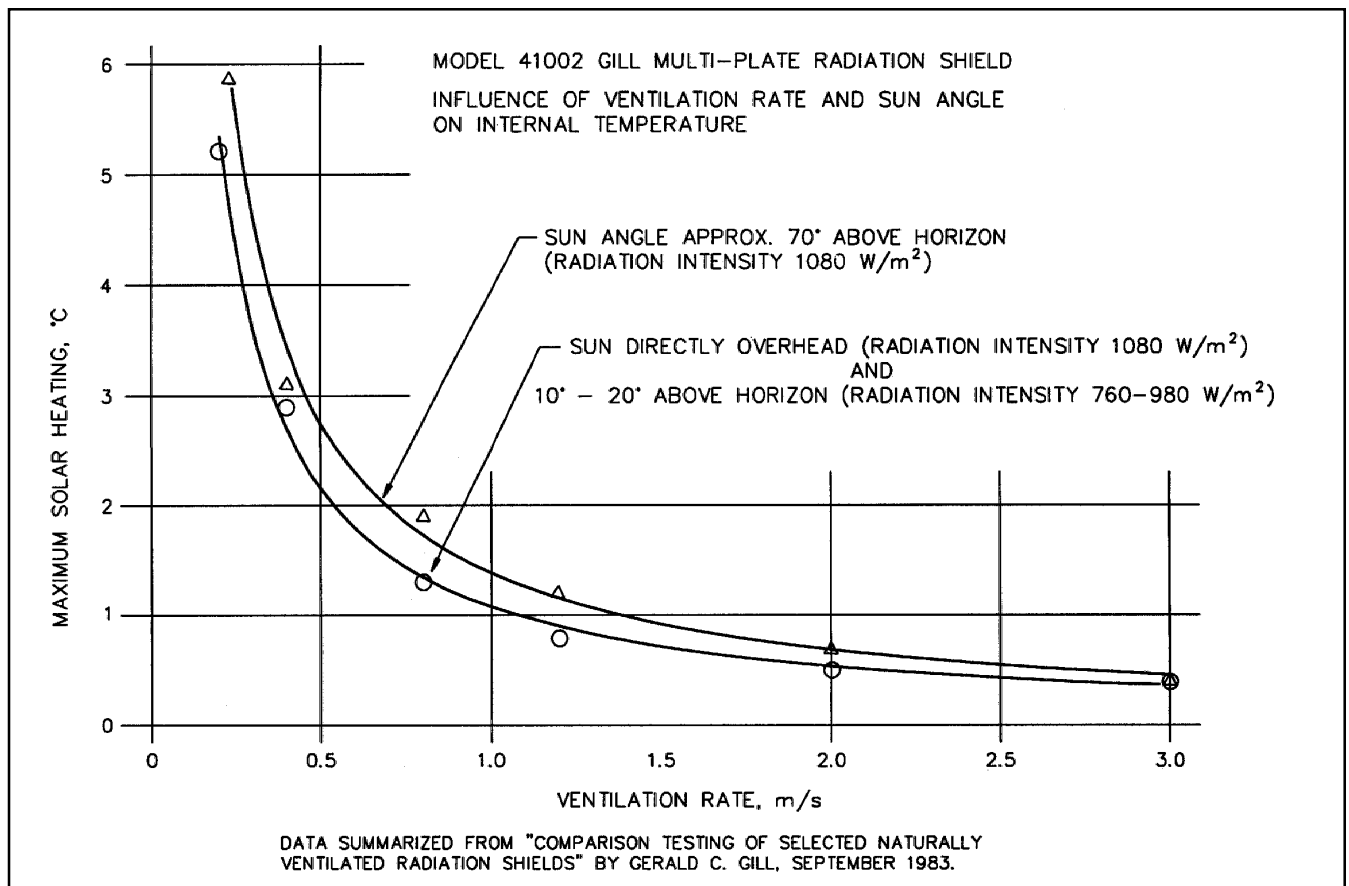

UV stabilized white thermoplastic plates.
Aluminum mounting bracket, white
Stainless steel U-bolt mounting clamp.

Dimensions:

12 cm (4.7 in) D x 27 cm (10.6 in) H
Mounting fits vertical pipe 25-50 mm (1-2 in) diameter

Weight:

Net wt 0.7 kg (1.6 lb)
Ship wt 1.4 kg (3.2 lb)
